INSTALLATION OVERVIEW

This chapter gives you an overview of the SDL Trados 2007 Suite installation procedure and an overview of the SDL Trados 2007 Suite system. Sections include:

- About this Guide
- Introducing SDL Trados 2007 Suite
- Overview of Installing SDL Trados Products
- Installation Media
- Upgrade and Compatibility Information
ABOUT THIS GUIDE

This guide describes how to install and license:

- SDL Trados 2007 Suite - Professional
- SDL Trados 2007 Suite - Freelance

Using SDL Trados 2007 Suite tools is described in the product help and documentation. SDL Trados guides and tutorials are placed in the following location during product installation:

C:\Program Files\SDL International\SDL Trados 2007\FL\Documentation
C:\Program Files\SDL International\SDL Trados 2007\FL\Tutorials
C:\Program Files\SDL Passolo 2007\Manuals

INTRODUCING SDL TRADOS 2007 SUITE

SDL Trados 2007 Suite is a suite of products that work together to enable translation teams to share translation tools, resources and project files. Resources such as translation memories and project tracking tools can be shared over an intranet or over the Internet.

SDL Trados 2007 Suite contains the following two products:

- SDL Trados 2007
- SDL Passolo Essential including all main functions needed for the localization of software

This guide mainly contains information on SDL Trados 2007. For more information on SDL Passolo Essential and its restrictions compared to the Professional and Team Editions, refer to the SDL Passolo Getting Started Guide and SDL Passolo Handbook included with SDL Passolo Essential. You can access this documentation from the Start view in SDL Trados Synergy or through the Windows Start menu under All Programs > SDL Passolo > Manuals.

SDL Trados 2007 Suite can also be a single-user tool where the SDL Trados 2007 Suite software and translation memories are located on your computer and there is no interaction with translation memories or projects over an intranet or the Internet.
System Architecture

In a multi-user setup SDL Trados 2007 Suite has a three layer architecture as this diagram shows. In a single-user setup all resources are located on the user’s computer.

The Client Layer

Clients include: Synergy, Translator’s Workbench, TagEditor, SDL Passolo and Server Manager. Synergy, Translator’s Workbench, TagEditor and SDL Passolo Essential are packaged together as SDL Trados 2007 Suite Professional and SDL Trados 2007 Suite Freelance.

- SDL Trados Server Manager is the client used by system administrators to manage server-based-translation memories and user access rights to translation memories.
- Synergy is the SDL Trados 2007 Suite project management tool where projects are created and distributed and project team members open and translate project packages.
- Translator’s Workbench is where translation memory administration is performed.
- TagEditor is where tagged files are translated. The special editing environment ensures that information in tags is not lost during translation.
SDL Passolo Essential is a localization tool for text resource translation and software localization. Text resources are the text components of a software that are displayed on the screen.

SDL Trados Server Manager is the administration client for server-side components of SDL Trados 2007 Suite.

In a setup that includes server components, clients communicate with SDL Trados 2007 Suite Server components through the intranet (through a LAN or WAN) or through the Internet using TM Anywhere Server. Clients communicate with database servers through middleware components.

**NOTE**

SDL Trados Server Manager communicates with SDL Trados 2007 Suite Server through the intranet only.

The Middleware Server Layer

Contains the servers that enable SDL Trados 2007 Suite users to access server-based translation memories and project tracking on the project tracking server. This layer also handles all communication with the databases holding translation memories.

The Database Server Layer

The database server layer is the data storage layer for SDL Trados 2007 Suite. It contains the databases where translation memories and user credentials are stored. One or more database servers can be used. Clients cannot access databases directly, all access is through servers in the Middleware layer.

Language Support

In general, language support in the SDL Trados translation memory suite corresponds to the language support installed on your system. For more information about specific support for bi-directional and double-byte character set (DBCS) languages in Translator’s Workbench, and TagEditor, see the relevant online help system and the product release notes. Additional information is available from the SDL online support center at [http://support.sdl.com](http://support.sdl.com).
OVERVIEW OF INSTALLING SDL TRADOS PRODUCTS

The installation programs for both SDL Trados Freelance and Professional follow the same pattern:

**Step 1**
On the machine where SDL Trados is being installed, the installer program checks for the presence of prerequisite software. This is software that must be in place for SDL Trados to function correctly. For example, SDL Trados requires the .NET Framework 2 to be present. If pre-requisite software is not found on your machine, it is installed with SDL Trados.

**Step 2**
You are presented with a list of the items that will be installed. The list may include missing software prerequisites as well as SDL Trados software. At this point it is possible to remove items from the list. However, this is not recommended as SDL Trados will not function correctly if you do this.

**Step 3**
The listed software items are installed. Prerequisite software is installed before SDL Trados. Each item of prerequisite software may have its own installation screens and licensing agreement which are displayed in the SDL Trados 2007 Suite installer.

**Step 4**
You can choose to perform a default or custom installation of the SDL Trados 2007 Suite software. In a custom installation you can choose not to install all SDL Trados 2007 Suite components, or to install SDL Trados 2007 Suite to a non-default location.

**Step 5**
SDL Trados components are installed.

At the end of the installation process you have the opportunity to activate the SDL Trados 2007 Suite product by licensing the software for the machine where it has been installed. See “About Activating SDL Trados 2007 Products” on page 2-9 for more information.

If you are using the software in trial mode, you have thirty days in which you can use it without purchasing a valid license. After 30 days, if you have not purchased a valid license the software will either cease to function or will function in a severely limited form known as demo mode.

For more information about product licensing, see *Chapter 2 Licensing SDL Trados 2007*. 
INSTALLATION MEDIA

When you purchase SDL software you can either order a product CD or download the software from the Internet.

- If you purchased a CD, install SDL Trados 2007 Suite directly from the product CD.
- If you are installing the software from a network resource, ask your system administrator for the network location of the SDL Trados 2007 Suite installer setup program.
- If you downloaded the software, go to the location where you stored the downloaded files and run the installer from there.

UPGRADE AND COMPATIBILITY INFORMATION

This section contains important information if you are upgrading from an earlier version of the software. It also discusses how different versions can co-exist during the transition period of upgrading.

We strongly recommend that you finish translating files that were initially processed in earlier versions before upgrading to SDL Trados 2007 Suite.

Upgrading from SDL Trados 2006 and SDL Trados 7.x

Translation Memory Compatibility

Translation memories created in SDL Trados 2007 Suite have the database version number 7.x.

Translation memories created in TRADOS 7.x and earlier can be opened by and used in version 8.x of Translator's Workbench. However, in order to benefit from the Unicode-related enhancements, it is necessary to export the 6.5 or earlier translation memories in version 6.x or earlier and then import them into newly created translation memories.
Translation memories created in versions 7.x/8.x of Translator’s Workbench cannot be opened in earlier versions of Translator’s Workbench (version 6.5 and earlier). This is due to the support for new languages and the ability to store Unicode content in any language in translation memory metadata fields, such as text and attribute fields. However, translation memories can be exchanged between version 7.x and 8.x of Translator’s Workbench without any problems, as translation memories in these versions share the same database format. This applies to both file and server-based translation memories.

Importing 7.x/8.x-produced export files into a 6.x installation may result in corrupt TM data (fields, as well as segments), if Unicode characters are present in the 7.x/8.x TM that is exported into 6.x format.

By default, export files of Translator’s Workbench translation memories are now encoded in Unicode (UTF-8) in order to support the new languages and other Unicode content in translation memories. These export files can only be imported into version 7.x/8.x translation memories and cannot be exchanged with users of older versions. A backward-compatible export format is still available for use with older versions; however this file format does not support any of the new Unicode-related enhancements.

Installing Different Versions of SDL Trados on the Same Computer

During the upgrade period, you may want to have different versions of the SDL Trados translation solution co-exist on your computer. In this situation, we recommend the following:

In general, you can install SDL Trados 2007 Suite on the same computer as the previous versions (version 7.5 or earlier), provided that each version is installed to a separate folder. The default installation location for each version of the software is different.

Do not use different versions of the software at the same time. For example, close Translator’s Workbench 7.x before registering and opening Translator’s Workbench 8.x.

Do not run different versions of the same component at the same time. If you are using several tools at once, do not work with mixed versions of the software. For example, if you are translating files in TagEditor, use TagEditor 8.x with Translator’s Workbench 8.x. Do not use TagEditor 8.x with Translator’s Workbench 7.5 and vice versa.

We recommend that you use the same version of the software to translate files from start to finish. Migrating files from an earlier to a later version of the software when the project has already started may result in data inconsistencies.

When alternating between two different versions, you must register the software you are about to use by executing a special self-registration batch file. The batch file for each version is accessed from the Start menu on your computer.
TRADOS Edition 2.x, 3.x, 5.x

Limited compatibility may apply between SDL Trados 2007 Suite and editions 2.x/3.x/5.x of the TRADOS translation solution. Limited compatibility between translation memories created in Edition 2.x/3.x and Translator’s Workbench 5.x and 6.x may also apply. Contact SDL before migrating Edition 2.x/3.x/5.x memories to Translator’s Workbench 7.x/8.x.

Migrating from a Dongle to a License File

If you are upgrading from an earlier version of Trados software which used a dongle you cannot use your old dongle with the later version of the software. Please contact customer support for additional information on upgrading your license.

MultiTerm Compatibility

SDL Trados 2007 Suite is compatible with the following SDL MultiTerm versions: MultiTerm 2007 (version 7.5) and previous 7.x releases, MultiTerm iX (version 6.x) and MultiTerm 5.5. SDLX 2007 is compatible with SDL MultiTerm 2007 and 7.x only. To avail of the new terminology features such as active terminology recognition across several terminology databases and quick term entry from Translator’s Workbench and TagEditor, you must use MultiTerm 2007 or 7.x Desktop. For optimum performance, we recommend using MultiTerm 2007 (version 7.5) in conjunction with SDL Trados 2007 Suite.

Registering the Software

When alternating between two different versions, you must register the software you are about to use by executing a special self-registration batch file. The batch file for each version is accessed from the Start menu on your computer after installation.

To register version 8.x of the software, go to the Start menu on your computer and point to the program folder for SDL Trados 2007 Suite. In the program folder, select Register SDL Trados 2007 to execute the batch file for the version 8.x software.

Once the you have run the batch file successfully, the software is ready for use.

NOTE

If you install SDL Trados 2007 Suite on Windows Vista with an Administrator Account but UAC (User Account Control) activated, the SelfRegister.bat does not work by default due to increased security on Windows Vista. To run the registration bat files, you must Right-click the batch file and select Run as administrator. You will be asked for your permission to run the script with elevated permissions.
This chapter describes how SDL Trados 2007 licenses are managed. Topics include:

- Licensing SDL Trados 2007 Products
- Downloading SDL Trados 2007 License Files and Product Activation Codes
- About Activating SDL Trados 2007 Products
- Managing Licenses for Products Activated Online
- Managing Floating License Files
- Demo Mode
Licensing SDL Trados 2007 Products

When you purchase and download your SDL Trados 2007 software from the Internet, you download your product license at the same time. SDL Trados 2007 products use the following license types:

- Product Activation Code
- Softkey license file - Floating
- Softkey license file - Node Locked.

Each type is described in detail below.

Product Activation Code – The Default Licensing Method

This type of license is used for SDL Trados 2007 Freelance and SDL Trados 2007 Professional. The license takes the form of an activation code downloaded from the SDL licensing website when you purchase the software. Once the software is installed on your computer you must activate the product by licensing the product on that computer. You do this by connecting to the SDL licensing website from the computer and activating the product using the code. This is referred to as ‘online activation’.

You connect to the SDL licensing website using the SDL Product Activation wizard. The wizard is displayed automatically at the end of product installation. Until you have activated the product online, the wizard will also appear every time you start the software.

Once you have activated the product online, the license is valid for the machine from which you performed the activation and no further action is required. If you have to move the software to a different computer you must return the license and then activate the product online from the new computer, using the same activation code. Licenses are returned using SDL License Manager.

**NOTE**

- Floating licenses can also be used with SDL Trados 2007 Professional.
- SDL Trados Freelance users can use the same activation code to activate the same product on two computers as long as the computers are not on the same network.
**SDL License Manager**

SDL License Manager is installed on your computer as part of SDL Trados 2007. You use the SDL License Manager to:

- View your current licenses.
- Return a license (because you are moving the software to a different machine).
- Connect to the SDL licensing website and activate a product online.

**NOTE**

If you cannot return a license because the machine where you activated the product has crashed and cannot be restarted, you must contact product support.

**30 Day Trial Users**

By special arrangement you can download the software without purchasing a license and use the software free of charge for 30 days. After 30 days, if you have not purchased a valid license and activated the product online, the software will either cease to function or it will switch to demo mode. To find out more about demo mode restrictions, go to page 2-36.

Each time you open the product the **SDL Product Activation** wizard is displayed. When you decide to purchase a license, you can do it from here.

**Group Activation Code for SDL Trados 2007 Professional Users**

Your organization may have a single online activation code to be used by all users. Each user who installs the software activates the product online using the same activation code. The number of times the code can be used is limited to the number of licenses that were purchased.

**NOTE**

Shared activation codes behave in exactly the same way as individual codes. For example, the code may be returned from one computer and then activated on a different computer.
Floating Softkey License File

In this scenario the number of licenses purchased is smaller than the number of users who have installed the software. When a user opens the software, they are automatically allocated one of the available licenses. When they close the software, the license they were using is immediately made available to other users.

Floating licenses are managed by FLEXlm License Server. It automatically allocates the correct license to a user when they open the SDL Trados 2007 software and takes the license back again when the user closes the application. Users connect to the License Server through the local network.

Floating licenses are issued as a single (*.lic) license file which is stored on the server computer where FLEXlm License Server is installed. Users have to set up their personal computer to access the server where the floating licenses are being managed. They do this using SDL License Manager. See “Managing Floating License Files” on page 30. for more information.

SDL Trados 2007 server tools use floating licenses.

NOTE

If you open an application and no floating license is available, the application will operate in demo mode. To find out more about demo mode restrictions, go to page 2-36.

Node Locked Softkey License File

A node locked softkey license takes the form of a license (*.lic) file and licenses the use of one SDL Trados 2007 application on one computer.

In special circumstances, by prior agreement with SDL, a node locked softkey license may also be given to a user instead of an online activation code.

For server applications, node locked softkey license files are downloaded from the SDL licensing website and placed on the server computer where FLEXlm License Server is to be installed (or is already installed). Server application licenses are managed by FLEXlm License Server. FLEXlm License Server is managed and maintained by your administrator.
DOWNLOADING SDL TRADOS 2007 LICENSE FILES AND PRODUCT ACTIVATION CODES

SDL Trados 2007 product activation codes and license files are generated in and downloaded from the My Licenses page at the following address: http://oos.sdl.com/myaccount. This is the web address of SDL’s Customer Center.

- Product activation codes are copied to the clipboard of your computer and then used to activate your product.

- Personal license files (*.lic) are downloaded to your computer where they are managed using SDL License Manager.

- License files for server tools and floating licenses are downloaded to the computer where FLEXlm License Server is to be installed. We recommend that you download the license before installing FLEXlm as you will be asked for the license file location during the FLEXlm installation process.

**NOTE**

If you do not have the license file when you install FLEXlm License Server, you can install FLEXlm and add the license location later. However, this is a more involved process that requires you to stop and restart the FLEXlm License Server service.

When you purchase SDL Trados 2007 software, you are sent an email listing the items that you have purchased. This email also contains the URL for the SDL product licensing website. Your login details for the licensing website are sent to you in a separate email when your account is created on the licensing website.

When you later purchase additional licenses or an upgrade, the email confirming your purchase will not contain the URL.
**Downloading an SDL Trados 2007 License File**

1. Click the URL in the email you received from SDL, or enter the licensing website URL http://oos.sdl.com/myaccount into your browser. The website opens on the Login page.

2. Enter your user name and password and click Login. If you have more than one account the Account Selection page is displayed. Click a Use this account button to display the Account Summary page for the selected account.

If you have a single account, the Account Summary page is displayed.
3 Click the **My License** link to display the **My Licenses** page.

These are product activation codes. Select (highlight) the code you require and right-click and opt to copy it to the clipboard of your computer. You can paste it directly from the clipboard into the SDL Product Activation wizard.

4 Locate the product for which you want to generate the license.

5 Click the **Generate License File** link to display the **Generate License File** page. This is where you generate the license file and download it to your computer or to the server where FLEXlm will be installed. Make a note of where you place the license file.
6 Repeat step 3 for any other licenses that are ready for downloading.

**NOTE**

Directions on how to generate and download license files are available on the licensing website.

Once you have successfully generated and saved your license file, you can activate your product. See “About Activating SDL Trados 2007 Products” on page 9.

**Downloading a Product Activation Code**

1 Click the URL in the email you received from SDL, or enter the licensing website URL http://oos.sdl.com/myaccount into your browser. The website opens on the Login page.

2 Enter your user name and password and click Login.

   If you have more than one account the Account Selection page is displayed. Click a Use this account button to display the Account Summary page for the selected account

3 Click the My License link to display the My Licenses page.

4 Under the section headed, **My Product Activation Codes**, locate the code to be downloaded.

5 Select the code and right-click.

6 Select Copy. The selected code is copied to your computer’s clipboard.
ABOUT ACTIVATING SDL TRADOS 2007 PRODUCTS

When you install an SDL Trados 2007 product, the product is not valid for use until it has been activated. Activation means that the product has been licensed for use on the machine where it is installed. The type of activation you perform is determined by the type of license you purchased:

- If you have an activation code, you perform online activation.
- If you are using floating licenses, you activate your product by setting up your computer to connect to the server computer where floating licenses are stored.
- If you have a personal node locked softkey license, you activate your product by linking the software to the downloaded license file.

Both the SDL Product Activation wizard and the SDL License Manager can be used to perform all three types of activation.

The Product Activation Wizard

The SDL Product Activation wizard is displayed automatically when you are installing the SDL Trados 2007 product. It is also displayed automatically whenever you open a product that has not been activated.

This is the opening page of the SDL Product Activation wizard:
The **SDL Product Activation** wizard contains options to perform the following actions:

- Activate the product online.
- Activate the product by setting up access to the server where floating licenses are being managed.
- Activate the product by linking it to a (*.lic) file located on your personal computer.
- Connect to the SDL website and purchase a valid license or to continue using the software in trial mode. This option is for users who have been using the software in trial mode.

Choose the required option and click **Next** to continue.

There are two other versions of this opening page. They are specific to users working in trial mode.

This version of the opening page is displayed when the 30 day trial period has expired and the product is running in demo mode:

- To continue running the product in demo mode, select **Continue in demo mode**. To find out more about demo mode restrictions, go to page 2-36.
This version of the opening page is displayed when the 30 day trial has expired and there is no demo mode available for the product:
SDL License Manager

SDL License Manager is installed with SDL Trados 2007 and is always available.

SDL License Manager contains options for:

- Activating licenses online.
- Viewing licenses that were activated online.
- Returning licenses that were activated online.
- Setting up your software to use floating licenses.
- Setting up your software to use a node locked softkey license file.

To display SDL License Manager, go to Start > Programs > SDL International > SDL Trados 2007 > License Manager > License Manager.
ACTIVATING YOUR PRODUCT USING THE SDL PRODUCT ACTIVATION WIZARD

Depending on the type of activation you are about to perform, you will need:

- the product activation code, or
- the name and port number of the server where floating licenses are managed, or
- the location of your node locked softkey license file.

To activate your product using the SDL Product Activation Wizard:

The **SDL Product Activation** wizard is displayed:

- Automatically at the end of installing the software.
- Automatically every time you start software that has not yet been activated.

1. The wizard opens at the **Product Activation** page.

![SDL Product Activation Wizard]

**NOTE**

If you are using SDL Trados 2007 software on a 30 day trial, the opening page may have different options. However, all versions have the **Show me how to activate the product** option.
2  Select **I have purchased a license. Show me how to activate the product.** and click **Next.** The Select Activation Method page is displayed.

3  Choose an activation method:

   - If you will be using floating licenses, select **Connect to a local license server**, click **Next** and go to step 4.
   - If you have a personal node locked softkey (*.lic) license file, select **Use a local license file**, click **Next** and go to step 5.
   - If you have a product activation code, select **Activate your product online**, click **Next** and go to step 6.
4 This version of the **Product Activation** page is displayed if you selected **Connect to a local license server**:

![Select License Server dialog box](image)

- Overtype the entry in the **Select license server** box with the name and port number of the server used to manage floating licenses. The entry should take the form: `port_number@server_name` with no spaces.
- Click **Next**. The server details are authenticated. If the server details are correct, activation is complete. Click **Finish** to exit the wizard.
- If activation fails, click **Back** to return to the previous page. Check that the server name and port number are correct and that you have entered them in the correct format. Click **Next**.

5 This version of the **Product Activation** page is displayed if you selected **Use a local license file**:

![Select License File dialog box](image)
Click **Browse** and navigate to the folder containing the (*.lic) license file. When you have selected the folder, check that the correct details appear in the **Select license file** box and then click **Next**.

- If the product was activated successfully, click **Finish** to exit the wizard.
- If product activation failed, click **Back** to return to a previous page. Correct the folder details you specified and then click **Next** to continue.

This version of the **Product Activation** page is displayed if you selected **Activate your product online**. Enter your activation code in the boxes provided.

If you have copied the activation code to the clipboard you can press [Ctrl+V] to insert the code in the boxes or you can right-click and select **Paste** from the shortcut menu.

If you use a proxy server to access the Internet, click **Advanced**. The **Advanced Settings** dialog box is displayed. Enter the proxy server details and your username and password for the server, then click **OK** to close the dialog box.
NOTE
Your system administrator will tell you if you need to use a proxy server and will give you the server details.

7 Click Next. The wizard connects to the SDL website to validate the code.

- If the product was activated successfully, click Finish to exit the wizard.
- If product activation failed because you entered the wrong code, click Back to return to a previous page. Update the activation code and click Next.

NOTE
If activation failed for some other reason, speak to your administrator.
ACTIVATING YOUR PRODUCT USING SDL LICENSE MANAGER

You can use SDL License Manager to activate your product online, to connect to a floating license server or to connect to a local softkey license file.

Activating your Product Online

You will need the activation code that you downloaded earlier.

1. Go to Start > Programs > SDL International > SDL Trados 2007 > License Manager > License Manager. The SDL License Manager dialog box is displayed.

   ![License Manager dialog box]

   These tools are used for online activation and management of licenses activated online.

   ![License Manager dialog box]

   These tools are used to manage license files.

   NOTE

   SDL License Manager can also be displayed by selecting the License Manager option on the product Help menu.
2  Click **Activate Online** to display the **Enter Activation Code** page.

3  Complete the **Enter Activation Code** page.

   Enter your activation code in the boxes provided. If you have copied the code to the clipboard you can press [Ctrl+V] to insert the code in the boxes or you can right-click and select **Paste** from the shortcut menu.

   If you use a proxy server to access the Internet, click **Advanced**. The **Advanced Settings** dialog box is displayed. Enter the server details and your username and password for the server then click **OK** to close the dialog box.

4  Click **Next**. The wizard connects to the Internet to validate the code.
If the **Activation Failed** page is displayed, check the reason for the failure. You can either click **Back** to go back to an earlier stage and correct the error or click **Finish** to exit the wizard.

If the activation code is valid the **Activation Successful** page is displayed:

5. Click **Finish** to exit the wizard.
Activating your Product using Floating Licenses

You will need the name of the license server and the number of the port used to access the server. Your system administrator will give you this information.

To activate your product using floating licenses:

1. Go to Start > Programs > SDL International > SDL Trados 2007 > License Manager > License Manager. The SDL License Manager wizard is displayed.
2 Click License Locations. The Change License Locations and Test Files page is displayed.

3 Click Add. The Specify FLEXlm License Location page is displayed.

4 Select the first option: Enter the port and name of the computer where SDL License Server is installed. The box below the option opens ready for editing.
5 In the box, enter the name and port of the server where the floating licenses are stored. The format for this information is **port number@server name**. For example, if your server is **server01** and the number of the port to be used is **27000**, the entry would look like this: **27000@server01**.

6 Click **OK**. The server is added to the list under **License file locations** in the **Change License Locations and Test Files** page.

7 Click **OK** to close the **Change License Locations and Test Files** page. The licenses available to borrow now appear in the **License Status** box.

8 Click **Close** to close SDL License Manager.
Activating your Product using a Personal Softkey License File

1. Go to Start > Programs > SDL International > SDL Trados 2007 > License Manager > License Manager. The SDL License Manager dialog box is displayed.

2. Click License Locations. The Change License Locations and Test Files page is displayed.
3 Click Add. The Specify FLEXlm License Location page is displayed.

4 Select the second option: Enter the path to the license file. The box below the option opens ready for editing.

5 Click Browse and browse to the folder where your license file is stored.

6 Select the file and click OK to close the Specify FLEXlm License Location page.

7 Click OK. The license is added to the list under License file locations in the Change License Locations and Test Files page.

8 Click OK to close the Change License Locations and Test Files page.

9 Click Close to close SDL License Manager.

You may have to stop and restart your software in order for the software to start using the license file.
MANAGING LICENSES FOR PRODUCTS ACTIVATED ONLINE

The tools available for managing products activated online enable you to:

- View your licenses.
- Return a license so that it can be used on another computer.
- Repair a license.

Viewing Licenses

The Installed Licenses dialog box lists the licenses that you currently have installed. The list includes both trials and activated products. Each license is shown as a Fulfillment.

To view your installed licenses:

1. Go to Start > Program Files > SDL Trados 2007 > License Manager > License Manager. The SDL License Manager dialog box is displayed.

2. Click View Licenses. The Installed Licenses dialog box is displayed.
3 To view a license in detail, double-click the license entry in the **Fulfillment ID** column. The **License Details** dialog box is displayed.

4 Click **Close** to close the **License Details** dialog box.

5 Click **Close** to close the **Installed Licenses** dialog box.
Returning a License or Licensing your Product on a Different Computer

To license your product on a different computer you simply return the license to the SDL licensing website and then use the same activation code to activate the product on the other computer.

1. Go to Start > Program Files > SDL Trados 2007 > License Manager > License Manager. The SDL License Manager dialog box is displayed.

2. Click View Licenses. The Installed Licenses dialog box is displayed.

3. Select the license to be returned and click Return License. The license is returned to the online product activation centre.

You can now install the product on another machine and then activate the product online using the same product activation key.

⚠️ WARNING

If you do not return your license, you will not be able to activate the product on another machine.
Repairing a License

If your license is damaged, this procedure describes how to get it repaired. A license may become damaged if it has been restored from a backup and needs to be verified or if the system clock on your computer has changed.

**NOTE**
You cannot repair a damaged 30 day trial license.

1. Go to **Start > Program Files > SDL Trados 2007 > License Manager > License Manager**. The **SDL License Manager** dialog box is displayed.

2. Click **View Licenses**. The **Installed Licenses** dialog box is displayed.

3. Select the license to be repaired and click **Repair License**. The repair request is sent to the online product activation centre.

   - If the repair is successful a dialog box confirms that the repair has been made and the status of the license changes to **OK** in the **Status** column of the **Installed License** dialog box. Go to step 7.

   - If the license could not be repaired the **Damaged License Removed** dialog box is displayed and the license is deleted from the list in the **Installed Licenses** dialog box. Click **Close** to close the **Damaged License Removed** dialog box.

4. Click **Close** to close the **Installed Licenses** dialog box.
If your license cannot be repaired and has been removed from the Installed Licenses dialog box:

- Log on to the SDL customer website and return your license.
- When you have successfully returned the license, activate the product online using the original activation code.

If you are not able to return the license, contact SDL support.

MANAGING FLOATING LICENSE FILES

This section describes how to:

- Borrow a floating license so that you can work with the SDL Trados 2007 product when you are not connected to the network.
- Return a borrowed floating license early.
- Switch to a different floating license server.

Borrowing a Floating License

If you need to use an SDL Trados product when not connected to the network you can ‘borrow’ a floating license. For example, you may want to use an SDL Trados product on a laptop computer when visiting a customer site.

When you borrow a license you specify how long you will need the license and it remains valid on your computer until the period you specified expires. When this period of time expires you do not have to return the license: it simply ceases to be valid for your copy of the software. At the time the licence ceases to be valid for you, it automatically becomes available for other users to borrow.

If you finish working with the SDL Trados software before the end of the loan period, you can choose to return the license early.
To borrow a floating license:

1. Go to Start > Programs > SDL International > SDL Trados 2007 > License Manager > License Manager. The SDL License Manager dialog box is displayed.

2. Click Borrow or Return. The Borrow a License dialog box is displayed.

3. From the list displayed under Choose the applications, select the application(s) for which you want to borrow a license.

4. Complete the Borrow license until boxes by selecting the date and time when you will be ready to return the license.

5. Click Borrow. The following dialog box is displayed:

6. Click OK to close the dialog box.

7. Click Close to close the Borrow a License dialog box.

8. Click Close to close the SDL License Manager dialog box.

You can see the current status of your license by selecting Help > About from the menu bar of the SDL Trados application for which the license was borrowed.
Returning a Borrowed License Early

If you no longer need a borrowed license and the loan period has not yet expired, you can return the license early.

**NOTE**

If you do not return the license early, it will be returned automatically at the date and time you specified as the end of the loan period.

To return a borrowed license early:

1. Go to Start > Programs > SDL International > SDL Trados 2007 > License Manager > License Manager. The SDL License Manager dialog box is displayed.

2. Click Borrow or Return. The Borrow a License dialog box is displayed.

3. Select the application for which you are returning the license and click Return Early. The following dialog box is displayed:

   ![SDL License Manager](image)

   The license for the application has been returned successfully.

4. Click OK to close the dialog box.

5. Click Close to close the Borrow a License dialog box.

6. Click Close to close the SDL License Manager dialog box.
Changing your Floating License Server

If your organization moves its floating licenses to a different server, you will have to update SDL License Manager with details of the new server.

To update SDL License Manager with new license server details:

1. Go to **Start > Programs > SDL International > SDL Trados 2007 > License Manager > License Manager.** The **SDL License Manager** dialog box is displayed.

2. Click **License Locations.** The **Change License Locations and Test Files** dialog box is displayed.
3 Click Edit. The Specify SDL FLEXlm License Location dialog box is displayed.

4 Change the server and port details currently displayed under Enter the port and name of the computer where SDL License Server is installed and click OK. The updated server details appear under License file locations in the Change License Locations and Test Files dialog box.
5 Click **OK** to close the **Change License Locations and Test Files** dialog box. The licenses available to borrow now appear in the **License Status** box of the **SDL License Manager** dialog box.

![SDL License Manager dialog box](image)

6 Click **Close** to close SDL License Manager.
**DEMO MODE**

When copy protected SDL Trados 2007 software is running in demo mode, the following restrictions apply:

<table>
<thead>
<tr>
<th>Application</th>
<th>Restriction</th>
</tr>
</thead>
<tbody>
<tr>
<td>Translator’s Workbench</td>

</table>
This chapter contains all the information you need to install SDL Trados 2007 Suite Professional. It describes the hardware and software requirements for running SDL Trados 2007 Suite Professional and provides a step by step guide to installing SDL Trados 2007 Suite. Sections include:

- System Requirements
- About the SDL Trados 2007 Suite Professional Installer
- Installing SDL Trados 2007 Suite -Professional
- Maintaining your Installation
- What’s Next?
OVERVIEW

This chapter explains the system requirements for installing and running SDL Trados 2007 Suite and how to install SDL Trados 2007 Suite - Professional.

SYSTEM REQUIREMENTS

This section outlines the system requirements for installing and running SDL Trados 2007 Suite - Professional.

Hardware

☐ The minimum specification for using SDL Trados 2007 Suite - Professional is a PC with a 1 GHz Pentium IV or higher compatible processor and at least 512 MB RAM. We recommend 1024 MB.

☐ 300 MB of available disk space is required.

☐ A mouse or similar pointing device is required.

Platforms

On all Windows versions, we recommend that you remove support for any non-Western languages you do not work with from both the Windows Regional Options and the Microsoft Office Language Settings. We highly recommend only using the languages that you are translating into and from in both Windows and Word. For more information on how to achieve this, see the Windows and Word online help systems.

Your display settings should be set to at least 256 colours (in Start > Settings > Control Panel > Display > Settings).
Companion Software Required by SDL Trados 2007 Suite - Professional

This is the non-SDL software that you need to have installed on your machine in order for SDL Trados 2007 Suite - Professional to function fully.

- Microsoft Word 2000 or later. Translator’s Workbench requires this for processing Word or RTF-based files.
- Microsoft Excel 2000 or later. This is required for processing Excel files.
- Microsoft PowerPoint 2000 or later. This is required for processing PowerPoint files.
- Microsoft Internet Explorer 6 or higher is required to use the HTML-based help systems that ship with SDL Trados 2007 Suite. If you do not already have Internet Explorer 6, you will need to download it from the Microsoft website.

Language Support

- In general, language support in SDL Trados 2007 Professional corresponds to the language support that is installed on your system. For more information about specific support for bi-directional and double-byte character set (DBCS) languages in Translator’s Workbench, see the online help.
- We recommend using a localized version of Windows 2000, Windows XP or Windows Vista for translating to and from non-western, bi-directional and DBCS languages.
- If you are working with Hindi or other Indic languages, we highly recommend that you use the Arial Unicode MS font. This font ships with Microsoft Office. For more information on this font, refer to the Microsoft website and knowledge base.

Upgrading from an Earlier Version of SDL Trados

It is not necessary to uninstall earlier versions of SDL Trados before installing SDL Trados 2007 Suite. You can install SDL Trados 2007 Suite on the same machine where earlier versions are installed and continue to use the old versions with the new one. However, you cannot use different SDL Trados versions at the same time.
ABOUT THE SDL TRADOS 2007 SUITE PROFESSIONAL INSTALLER

This section describes the software components that are included in the SDL Trados 2007 Suite - Professional installation program.

SDL Trados 2007 Suite - Professional Components

This is a complete list of SDL Trados 2007 Suite - Professional components. In a default installation they are all installed.

**SDL Trados 2007**
Provides translation and translation project management tools.

**Synergy**
Provides project creation and management tools for SDL Trados. Project management can quickly create and distribute projects and track project progress in real-time. Project team members work with project files using SDL Trados translation tools and share project resources such as translation memories online.

**SDLX**
Enables SDL Trados 2007 to handle files created in SDLX and SDL TMS.

*Translator’s Workbench*
The SDL Trados 2007 translation memory tool.

*TagEditor*
A special tool for editing tagged files.

*WinAlign*
Enables you to create translation memories from previously translated files.

*S-Taggers*
Converts FrameMaker MIF or Interleaf files to a tagged format so that tags are preserved correctly during translation.

*Font Mappers*
Maps fonts into Asian fonts when translating FrameMaker and Interleaf files.

*Story Collectors*
Extracts translatable text from PageMaker and QuarkXPress files.
About the SDL Trados 2007 Suite Professional Installer

**SDL Passolo Essential**
A localization tool for text resource translation and software localization. Text resources are the text components of a software that are displayed on screen. SDL Passolo Essential includes all main functions needed for the localization of software, however there are some restrictions compared to the Professional and Team Editions of the software. For more information, refer to the *SDL Passolo Getting Started Guide* and *SDL Passolo Handbook* included with SDL Passolo Essential. You can access this documentation from the Start view in SDL Trados Synergy or through the Windows Start menu under All Programs > SDL Passolo > Manuals.

* Activation Utility for SDL Trados 2007
You will need this to activate your SDL Trados 2007 product online.

**NOTE**
It is possible to choose not to install the components marked with an asterisk (*). This would be a Custom installation.

The latest Word template file is automatically installed with Translator’s Workbench. The templates are: TRADOS8.dot for Word 2000-2003 and TRADOS8.dotm for Word 2007. This template is necessary to enable the SDL Trados - Word editing interface.

There is a further SDL Trados component, SDL Trados Desktop SDK. This component is not included in a default installation as it is a software developer tool not a translation tool.

### Other Software Installed with SDL Trados 2007 Suite
In addition to SDL Trados 2007 Suite components, other software is included in the installation program. This additional software is required either by the installation program itself or by SDL Trados 2007 Suite - Professional. You will probably have some of these additional software components on your computer already as they are used by many software applications:

- Install Script Engine 10.5
- Windows Installer 3.1
- Microsoft .NET Framework version 2.0.
- Java Runtime Engine (such as version JRE1.5.0_10) is required to translate RC, OpenOffice, Java Properties and InDesign CS2 (INX) files. If Java Runtime Engine is not installed on your machine, the SDL Trados 2007 Suite installer program will install it for you.
Installation Location

The default installation location for SDL Trados 2007 Suite - Professional components is:

C:\Program Files\SDL International\T2007.

The default installation for SDL Passolo Essential is:

C:\Program Files\SDL Passolo 2007.

During installation, you have the option of choosing a different installation location. This choice applies to the root folder for SDL Trados 2007 Suite Professional software, the T2007 folder. You can also choose a different installation location for SDL Passolo Essential.

All components of SDL Trados 2007 Suite Professional, apart from SDL Passolo Essential, install to their respective subfolders below the SDL Trados 2007 folder at the specified location. It is not possible to install components to different instances of the SDL Trados 2007 folder on the same computer. The installer guarantees that all SDL Trados 2007 Suite Professional components are located in the same SDL Trados 2007 folder.

NOTE
Access restrictions to certain SDL Trados 2007 Suite Professional files and folders may apply to some users on Windows Vista, Windows 2000 or Windows XP systems. For more information, see “Access Restrictions” on page 2-32.
INSTALLING SDL TRADOS 2007 SUITE - PROFESSIONAL

The installation routine for SDL Trados 2007 Suite - Professional is based on an installation wizard which guides you through the setup process.

- To install SDL Trados 2007 Suite - Professional on a Windows Vista, Windows 2000 or Windows XP operating system, you must have local administrator rights.
- The installer also supports administrative and silent installation. For information about an administrative installation, see “Other Installation Options” on page 3-27. For more information about a silent installation, see “Silent Installation” on page 3-28.

Installing SDL Trados 2007 Suite - Professional

Before you start:

- Locate either the downloaded product files or the product CD.
- Ensure that you have Internet Explorer 6 installed.
- If you want to log the installation, read the instructions on page 3-28.

To install SDL Trados 2007 Suite Professional:

1. If you downloaded the product from a website, double-click the downloaded file. The SDL Trados 2007 Suite - Professional wizard is displayed. This wizard prepares the product installation files and places them in the correct location. Move through the wizard by clicking Next and accepting the default values offered until the Welcome to SDL Trados 2007 Suite - Professional page is displayed.
If you have a product CD, run the CD. The Welcome to SDL Trados 2007 Suite - Professional page is the first page to be displayed.

2 On the Welcome to SDL Trados 2007 Suite - Professional page, click the Installation Software link. The Installation Software page is displayed.
3. Click Install SDL Trados 2007 Suite. The opening screen of the SDL Trados 2007 Suite Installer is displayed. It lists the software that will be installed.

- To install all components, go to step 4.
- To remove an item from the list, click Advanced. The Components List dialog box is displayed. Clear the selection from the item not to be installed and click OK. Remember that all of the components are necessary for SDL Trados 2007 Suite to run.

4. Click Install. If you do not currently have the .NET Framework 2.0 installed, it is installed now. Installation will take a few minutes.
If you do not currently have the Windows Installer 3.1 or the Install Script Engine installed, these will be installed first. To install these components accept the license conditions for use and keep clicking **Next**.

If you do not currently have the Microsoft Visual C++ 2005 Redistributable installed, this dialog box is displayed next.

Click **Yes**. This dialog box is displayed. It indicates that the Microsoft Visual C++ 2005 Redistributable software is being installed.

If you do not currently have the Java 2 Runtime Environment installed this dialog box is displayed next.
The License Agreement dialog box is displayed when the Java 2 Runtime Environment installation is ready to proceed.

Click Accept. The Java 2 Runtime Environment is now installed.
7. After a few minutes, when the installation is complete, the **Next** button is activated. Click **Next**, the **Welcome** page of the SDL Trados 2007 Suite installation wizard is displayed.

8. Click **Next**. The **License Agreement** page for SDL Trados 2007 Suite is displayed.
9. Accept the license terms and click **Next**. The **Customer Information** page is displayed.

10. Enter your details and click **Next**. The **Setup Type** page is displayed. A **Default** installation is selected by default.

11. If you want to perform a default installation, click **Next**. The **Ready to Install** page is displayed. Go to step 12.
If you do not want to install all of the default components, select Custom and click Next. The Custom Setup page is displayed. Items with a red X beside them will not be installed.

- To see what sub-features are included in a component, click the plus (+) sign preceding the component.
- To exclude a component from the installation, click the down arrow beside the component and select This feature will not be available.
- To include a currently excluded component, click the down arrow beside the component and select This feature and all subfeatures will be installed on local hard drive.
- To change the default installation location, click Change and complete the Change Current Installation Folder dialog box. When you have selected the required location, click OK.
- To view the space requirements for the software, click Space to display the Disk Space Requirements dialog box. Click OK when you have finished.
13 Click **Next**. The **Ready to Install Program** page is displayed.

14 Click **Install** to begin installing SDL Trados 2007 Suite. A status bar indicates installation progress.

15 When SDL Trados 2007 Suite has been installed the **End-User License Agreement** page for SDL Trados Synergy is displayed.
16 Accept the license terms and click **Next**. The **Destination Folder** page is displayed.

- If you want to install SDL Trados Synergy to a different location, click **Browse**. The **Change Destination Folder** dialog box is displayed. Navigate to the required folder and click **OK** to return to the **Destination Folder** page.

17 Click **Next**. The **Ready to install SDL Trados Synergy 2007** page is displayed.
18 Click **Install**. The **Installing SDL Trados Synergy 2007** page is displayed. The **Status** bar shows installation progress.

19 When SDL Trados Synergy has been installed the **Completed the SDL Trados Synergy 2007 Setup Wizard** page is displayed.
20 Click Finish. The SDLX installer is launched.

21 Click Next the SDLX 2007 License Agreement page is displayed.
Accept the terms of the license and click Next. The Choose Destination Location page is displayed. It shows where SDLX 2007 will be installed.

To install SDLX to a different location click Browse and use the Choose Location dialog box to select the location.

Click Next. The Ready to Install Program page is displayed.
24 Click Install to begin the SDLX 2007 installation. When SDLX has been installed the 
SDLX Installation Wizard Completed page is displayed.

25 Click Finish. The SDL Passolo Essential installer is launched.
26 Click **Next**. The **Destination Location** page is displayed.

If you want to install SDL Passolo Essential to a different location, click **Browse**. The **Select Destination Location** dialog box is displayed. Navigate to the required folder and click **OK** to return to the **Destination Location** page.

27 Click **Next**. The **Select Components** page is displayed. It lists the different items that will be installed.

To install all items, go to step 28.
To remove an item from the list, clear the check box next to the item. To install SDL Passolo, ensure that the check box next to Program Files is selected.

28 Click Next. The Important Note page is displayed.

29 If you have a previous install of SDL Passolo Essential running on your machine, close the application and then click Next. The Start Installation page is displayed.
30 Click **Install** to begin installing SDL Passolo Essential. The Installing page is displayed. The **All Files** section shows installation progress.

- Microsoft Primary Interoperability Assemblies 2005 is installed.

- Your system configuration is updated with the SDL Passolo Essential install.
When SDL Passolo Essential has been installed, the following page is displayed.

Click Finish. The product Activation Utility for SDL Trados 2007 Suite prepares to install.
33 When the activation utility has been installed the **SDL Product Activation** wizard is displayed.

![SDL Product Activation Wizard](image)

34 Choose an option and click **Next**. The options available are:

- Go to the SDL website and purchase a software license for SDL Trados 2007 Suite.
- Activate a license you have already purchased.
- Work with the software free of charge for 30 days in trial mode.

**NOTE**

For more information about the **Product Activation Wizard**, see “Activating your Product using the SDL Product Activation Wizard” on page 2-13.

35 If you chose either of the first two options you are taken to the appropriate screen and guided through the rest of the selected process.

36 If you chose to continue with the free trial, the installation is now complete.

SDL Trados 2007 Suite is now added to the **Start** menu on your desktop. Use the **Start** menu to launch each component as a stand-alone application.
Licensing

You can now use SDL Trados 2007 Suite for 30 days before you need to purchase a valid license and activate the product. If after 30 days you have not yet purchased a license, SDL Trados 2007 Suite and SDL Trados Synergy 2007 will cease to function or will function in demo mode only.

For more information about licensing, see Chapter 2 Licensing SDL Trados 2007.

For more information about demo mode, see “Demo Mode” on page 2-36.
OTHER INSTALLATION OPTIONS

Administrators may wish to use these alternative methods for distributing and installing SDL Trados 2007 Suite.

Administrative Installation

In an administrative installation, the system administrator copies the installer files to a location that is always available, typically a network drive. This means that the setup files are permanently accessible to anyone who wants to install SDL Trados 2007 Suite or modify or repair their SDL Trados 2007 Suite installation.

To perform an administrative installation of SDL Trados 2007 Suite:

1. From the **Start** menu, choose **Run**.

   In the **Run** dialog box, use the following syntax to specify the location of the SDL Trados 2007 Suite setup files if you downloaded the installer:

   ```
   Msiexec /a "c:\path to msi\SDL Trados 2007.msi".
   ```

   If you are using a product CD, insert the SDL Trados 2007 Suite product CD into the computer’s CD-ROM drive and use the following syntax in the **Run** dialog box to specify the location of the SDL Trados 2007 Suite setup files:

   ```
   Msiexec /a "d:\path to msi\SDL Trados 2007.msi".
   ```

   • **Msiexec** is the Windows installer service.
   • **/a** denotes an administrative installation.
   • **c: \** is the hard drive, **d: \** is the CD-ROM drive.

2. Click **OK** to start the installation wizard.

3. On the **Network Location** screen, specify the target location for the copy you make of the setup files.

4. Click **Install** to create the copy in the specified location.

5. When the process is complete, click **Finish** to close the installation wizard.

**NOTE**

This procedure only copies the SDL Trados 2007 Suite setup files to the specified location; it does not constitute an actual installation. Use the setup files to run the installation wizard and install, modify or repair the software in the usual way.
Logging an Installation

It is possible to log an installation to a TXT or LOG file. This log file provides the installation results and is useful for troubleshooting any installation problems.

To log an installation:

1. From the Start menu on your computer, choose Run. In the Run dialog box, use the following syntax to specify the location and file name of your setup files and the installation log file:

   ```
   Msiexec /i "c:\path to msi\myinstall.msi" /l*v "c:\path to logfile\mylog.txt"
   ```

   - `Msiexec` is the Windows installer service.
   - `/i` denotes the installation request.
   - `/l*v` denotes a verbose log file.

   To customize the installation log file, substitute `/l*v` with the alternatives below:
   - `/le` denotes a log file containing errors only.
   - `/lw` denotes a log file containing warnings only.
   - `/lp+` denotes a log file containing properties only.

2. Click OK to start the installation and create the installation log file.

   **NOTE**

   When you run Setup.exe it automatically creates a log file.

Silent Installation

To perform a silent installation:

1. Select Run from the Start menu.

2. Enter the command:

   ```
   msiexec.exe /i "<CompletePathTo 'SDL Trados 2007.msi'>" /qn
   ```

   This runs the default installation.

   The installation location is the same as for a standard installation. See “Installation Location” on page 3-6. For more information about silent installation, see the online support center at support.sdl.com.
MAINTAINING YOUR INSTALLATION

You can modify, repair or remove your SDL Trados 2007 Suite installation at any time using the program maintenance features available with the installer. These features are available on the Program Maintenance screen of the installation wizard:

- **Modify** – use this option to add or remove components to and from your installation.
- **Repair** – use this option to repair or restore missing files, shortcuts or registry entries in your installation.
- **Remove** – use this option to remove the SDL Trados 2007 Suite software set completely from your computer.

You can access the installation wizard and program maintenance features through the Add or Remove Programs Properties dialog box in the Control Panel of your computer. Alternatively, if you still have access to the installer setup files, you can start the wizard by double-clicking the SDL Trados 2007.msi file.

**NOTE**

To repair or modify your SDL Trados 2007 Suite installation, you must have access to the installer setup files in their original location.

Modifying your Installation

You can add or remove components from your current installation. You can modify SDL Trados 2007 Suite, SDL Trados Synergy and SDLX.

To modify your installation:

1. From the Start menu on your computer, choose Settings > Control Panel.
2. In the Control Panel, select Add or Remove Programs to open the Add or Remove Programs dialog box.
3. Select SDL Trados 2007 Suite from the list of programs and click Change. This starts the SDL Trados 2007 Suite installation wizard.
4. In the installation wizard, click Next to continue to the Program Maintenance screen:

5. In the Program Maintenance screen, select Modify and then Next to continue.

6. The Custom Setup screen is displayed. It lists all SDL Trados 2007 Suite components and indicates which components are currently included in your installation.

- Click on the plus (+) signs in the component tree to display all subfeatures.
- Select the components to add to your installation. Note that subfeatures cannot be installed independently of their parent features.
Mark the components to remove from your installation with an X. Removing a parent feature also removes its subfeatures.

7 Click Next to continue and proceed with the installation as outlined in the previous section.

Repairing your Installation

Use the repair feature to repair or restore missing files or registry entries in your installation. You can repair SDL Trados 2007 Suite, SDL Trados Synergy and SDLX.

To repair your installation:

1 From the Start menu on your computer, choose Settings > Control Panel.

2 In the Control Panel, select Add or Remove Programs.

3 Select SDL Trados 2007 Suite from the list of programs and click Change. This starts the SDL Trados 2007 Suite installation wizard.

4 In the installation wizard, click Next to go to the Program Maintenance screen.

5 In the Program Maintenance screen, select Repair and then Next to continue.

6 On the Ready to Repair Program screen, click Install. The installation wizard automatically runs the repair feature. When it is complete, click Finish.

Removing SDL Trados 2007 Applications

Use the Remove feature in the installer to remove SDL Trados 2007 Suite, SDL Trados Synergy and SDLX files, folders and registry entries from your computer.

The Remove option is available on the Program Maintenance screen of the SDL Trados 2007 Suite installation wizard. For more information on how to access this wizard, See "Repairing your Installation" on page 3-31.
Access Restrictions

Access restrictions to certain SDL Trados 2007 Suite files and folders may apply to some users on Windows Vista, Windows 2000 or Windows XP systems. The files that are most likely to be subject to access restrictions are sample files.

Sample

The default installation location for SDL Trados 2007 sample files is:

C:\Documents and Settings\All Users\Shared Documents\SDL Trados\Samples

This folder is accessible from the Start menu. Select Programs > SDL International > SDL Trados 2007 > Trados > Samples.

To use the sample files a user must have read/write access to the Samples subfolder. Alternatively, the sample files can be copied to a location where the user does have read/write access.

The default installation location for SDL Passolo Essential sample files is:

C:\Documents and Settings\All Users\Documents\Passolo 2007\Samples

This folder is accessible from the Start menu. Select Programs > SDL Passolo 2007 > Samples.

Sharing a Computer

In SDL Trados 2007, all tag (.ini) and filter settings files (.xml) are stored in the folder Documents and Settings\All Users\Application Data\SDL International\Filters on Windows 2000 and Windows XP operating systems and in the ProgramData\SDL International\Filters folder on Windows Vista. You must have read/write access to the appropriate folder in order to create filters and work with XML/HTML/SGML files.

The owner of a computer is automatically granted read/write access to these folders, however, any other user sharing the machine is not. To avoid Access Denied messages appearing in TagEditor on closing XML/HTML/SGML files or on saving filter settings, it is necessary to give all users using a machine read/write access to the Filters folder.

NOTE

On localized operating systems the folder structure partly uses names matching the language of the operating system. For example, on a German Windows XP system the folder is called Dokumente und Einstellungen\All Users\Anwendungsdaten\SDL International\Filters.
Technical Support

For more information on technical support, please consult the online support center at http://support.sdl.com.

WHAT’S NEXT?

The instructions in the SDL Trados 2007 Suite product user guides help you to quickly get started with SDL Trados Synergy and SDL Trados 2007 Suite components. You can also view the product tutorials for more information on using SDL Trados 2007 Suite.

SDL Trados 2007 Suite documentation can be found here: Start > Programs > SDL Trados 2007 > Documentation. The tutorials can be found here: Start > Programs > SDL Trados 2007 > Tutorials.

INSTALLING SDL TRADOS 2007 SUITE FREELANCE

This chapter outlines how to install SDL Trados 2007 Suite Freelance. It outlines system requirements for SDL Trados 2007 Suite Freelance and explains how to install the software. Sections include:

- Overview
- About the SDL Trados 2007 Suite - Freelance Installer
- Installing SDL Trados 2007 Suite - Freelance
- Maintaining your SDL Trados 2007 Suite Freelance Installation
- What’s Next?
OVERVIEW

This chapter explains the system requirements for installing and running SDL Trados 2007 Suite - Freelance.

Hardware

- The minimum specification for using SDL Trados 2007 Suite - Freelance is a PC with a 1 GHz Pentium IV or higher compatible processor and at least 512 MB RAM. We recommend 1024 MB.
- 300 MB of available disk space is required.
- A mouse or similar pointing device is required.

Platforms

SDL Trados 2007 Suite - Freelance runs on Windows Vista, Windows 2000 and Windows XP.

On all Windows versions, we recommend that you remove support for any non-Western languages you do not work with from both the Windows Regional Options and the Microsoft Office Language Settings. We highly recommend only using the languages that you are translating into and from in both Windows and Word. For more information on how to achieve this, see the Windows and Word online help systems.

Your display settings should be set to at least 256 colours (in Start > Settings > Control Panel > Display > Settings).

Companion Software Required by SDL Trados 2007 Suite - Freelance

This is the non-SDL software that you need to have installed on your machine in order for SDL Trados 2007 Suite Freelance to function fully.

- Microsoft Word 2000 or later. Translator’s Workbench requires this for processing Word or RTF-based files.
- Microsoft Excel 2000 or later. SDL Trados requires this for processing Excel files.
- Microsoft PowerPoint 2000 or later. SDL Trados requires this for processing PowerPoint files.
- Microsoft Excel 2000 or later. This is required for processing Excel files.
- Microsoft PowerPoint 2000 or later. This is required for processing PowerPoint files.

- Microsoft Internet Explorer 6 or higher is required to use the HTML-based help systems that ship with SDL Trados 2007 Suite. If you do not already have Internet Explorer 6, you will need to download it from the Microsoft website.

Language Support

- In general, language support in SDL Trados 2007 Freelance corresponds to the language support that is installed on your system. For more information about specific support for bi-directional and double-byte character set (DBCS) languages in Translator’s Workbench, see the online help.

- We recommend using a localized version of Windows Vista, Windows 2000 or Windows XP for translating to and from non-western, bi-directional and DBCS languages.

- If you are working with Hindi or other Indic languages, we highly recommend that you use the Arial Unicode MS font. This font ships with Microsoft Office. For more information on this font, refer to the Microsoft website and knowledge base.

Upgrading from an Earlier Version of SDL Trados

It is possible to have SDL Trados 2007 Suite and earlier versions of SDL Trados installed on the same machine. However, you cannot use different application versions at the same time.
SDL Trados 2007 Suite - Freelance Product Restrictions

These restrictions apply to the SDL Trados 2007 Suite - Freelance product:

**Synergy**
- You can create Synergy projects for personal use but you cannot create Synergy project packages for distribution.
- You can open and work with project packages received from other SDL Trados users.
- You cannot forward packages received from other users.
- You can access both file-based and server-based translation memories from Synergy project packages. However, access to server-based translation memories is restricted to access through the Internet (no LAN access).
- You can connect to project tracking servers.

**MultiTerm**
- You can access server-based SDL MultiTerm termbases.
- You can create local, file-based termbases.
- You cannot open termbases in shared mode.

**Languages**
- You can only work with five languages. This limit applies to both Synergy projects and SDL Trados translation tools.

**Translation Memories**
- You can create local, file-based translation memories.
- You can access server-based translation memories through the Internet.
- You cannot access translation memories in shared mode.
ABOUT THE SDL TRADOS 2007 SUITE - FREELANCE INSTALLER

This section describes the software components that are included in the SDL Trados 2007 Suite Freelance installation program.

SDL Trados 2007 Suite Suite - Freelance Components

This is a complete list of SDL Trados 2007 Suite - Freelance components. In a default installation they are all installed.

**SDL Trados 2007**
Provides translation and translation project management tools.

**Synergy**
Provides project creation and management tools for SDL Trados. Project management can quickly create and distribute projects and track project progress in real-time. Project team members work with project files using SDL Trados translation tools and easily share project resources such as translation memories online.

**SDLX**
Enables SDL Trados 2007 to handle files created in SDLX and SDL TMS.

**Translator's Workbench**
The SDL Trados 2007 translation memory tool.

**TagEditor**
A special tool for editing tagged files.

**WinAlign**
Enables you to create translation memories from previously translated files.

**S-Taggers**
Converts FrameMaker MIF or Interleaf files to a tagged format so that tags are preserved correctly during translation.

**Font Mappers**
Maps fonts into Asian fonts when translating FrameMaker and Interleaf files.

**Story Collectors**
Extracts translatable text from PageMaker and QuarkXPress files.
**SDL Passolo Essential**

A localization tool for text resource translation and software localization. Text resources are the text components of a software that are displayed on screen. SDL Passolo Essential includes all main functions needed for the localization of software, however there are some restrictions compared to the Professional and Team Editions of the software. For more information, refer to the *SDL Passolo Getting Started Guide* and *SDL Passolo Handbook* included with SDL Passolo Essential. You can access this documentation from the **Start** view in SDL Trados Synergy or through the Windows **Start** menu under **All Programs > SDL Passolo > Manuals**.

*Activation Utility for SDL Trados 2007*

You will need this to activate your SDL Trados 2007 product online.

**NOTE**

It is possible to choose not to install the components marked with an asterisk (*). This would be a Custom installation.

The latest Word template file is automatically installed with Translator’s Workbench. The templates are: TRADOS8.dot for Word 2000-2003 and TRADOS8.dotm for Word 2007. This template is necessary to enable the SDL Trados - Word editing interface.

**Other Software Installed with(SDL Trados 2007 Suite**

In addition to SDL Trados 2007 Suite components, other software is included in the installation program. This additional software is required either by the installation program itself or by SDL Trados 2007 Suite Freelance. You will probably have some of these additional software components on your computer already as they are used by many software applications:

- **Install Script Engine 10.5**
- **Windows Installer 3.1**
- **Microsoft .NET Framework version 2.0**.
- **Java Runtime Engine** (such as version JRE1.5.0_10) is required to translate RC, OpenOffice, Java Properties and InDesign CS2 (INX) files. If Java Runtime Engine is not installed on your machine, the SDL Trados 2007 Suite installer program will install it for you.
Installation Location

The default installation location for SDL Trados 2007 Suite - Freelance components is:

C:\Program Files\SDL International\T2007_FL.

The default installation for SDL Passolo Essential is:

C:\Program Files\SDL Passolo 2007.

During installation, you have the option of choosing a different installation location. This choice applies to the root folder for SDL Trados 2007 Suite Freelance software, the T2007_FL folder. You can also choose a different installation location for SDL Passolo Essential.

All components of SDL Trados 2007 Suite - Freelance, apart from SDL Passolo Essential install to their respective subfolders below the SDL Trados 2007 folder at the specified location. It is not possible to install components to different instances of the SDL Trados 2007 folder on the same computer. The installer guarantees that all SDL Trados 2007 Suite Freelance components are located in the same SDL Trados 2007 folder.

**NOTE**

Access restrictions to certain SDL Trados 2007 Suite - Freelance files and folders may apply to some users on Windows Vista, Windows 2000 or Windows XP systems. See "Access Restrictions" on page 4-32.
INSTALLING SDL TRADOS 2007 SUITE - FREELANCE

The installation routine for SDL Trados 2007 Suite - Freelance is based on an installation wizard which guides you through the setup process.

To install SDL Trados 2007 Suite Freelance on a Windows Vista, Windows 2000 or Windows XP operating system, you must have local administrator rights.

Before you start:

- Locate the downloaded SDL Trados 2007 Suite - Freelance product files.
- Ensure that you have Internet Explorer 6 installed.

To install SDL Trados 2007 Suite - Freelance:

1. If you downloaded the product from a website, double-click the downloaded file. The **SDL Trados 2007 Suite- Freelance** wizard is displayed. The wizard prepares the product installation files and places them in the correct location. Move through the wizard by clicking **Next** and accepting the default values offered until the **Welcome to SDL Trados 2007 Suite Freelance** page is displayed.

   If you have a product CD, run the CD. The **Welcome to SDL Trados 2007 Suite - Freelance** page is the first page to be displayed.
2. On the Welcome to SDL Trados 2007 Suite - Freelance page, click the Installation Software link. The Installation Software page is displayed.

3. Click Install SDL Trados 2007 Suite - Freelance. The opening screen of the SDL Trados 2007 Suite Installer is displayed. It lists the software that will be installed.
To remove an item from the list, click **Advanced**. The **Components List** dialog box is displayed. Clear the selection from the item not to be installed and click **OK**. Remember that all of the components listed in the **Components List** are necessary for Trados 2007 to run.

4 Click **Install**. If you do not currently have the .NET Framework 2.0 installed, it is installed now. Installation will take a few minutes.

If you do not currently have the Windows Installer 3.1 or the Install Script Engine installed, these will be installed first. To install these components accept the license conditions for use and keep clicking **Next**.
If you do not currently have the Microsoft Visual C++ 2005 Redistributable installed, this dialog box is displayed next.

Click Yes. This dialog box is displayed. It indicates that the Microsoft Visual C++ 2005 Redistributable software is being installed.

If you do not currently have the Java 2 Runtime Environment installed this dialog box is displayed next.
The License Agreement dialog box is displayed when the Java 2 Runtime Environment installation is ready to proceed.

Click Accept. The Java 2 Runtime Environment is now installed.
7. After a few minutes, when the other components have been installed, the **Welcome** page of the **SDL Trados 2007 Suite Freelance** installation wizard is displayed.

8. Click **Next** to display the License Agreement page.
9 Read through the contents of the license agreement, select I accept the terms in the license agreement and click Next. The Customer Information page is displayed.

10 Enter your details and select one of the options under Install this application for to indicate whether other users can use this copy of SDL Trados Freelance.

11 Click Next. The Language Selection page is displayed.
This page lists all languages supported by SDL Trados 2007 Suite Freelance. Select the languages you want to work with. You must select a minimum of two languages and a maximum of five. To select a language, select it in the **Available Languages** box and then click the right arrow to add it to the **Selected Languages** box. The selected languages, and their sublanguages will be available in the language lists of Translator’s Workbench, WinAlign and Synergy.

**NOTE**
It is important to select your languages carefully as revising your selections later requires a modification to your installation.

12 Click **Next**. The **Setup Type** page is displayed.

13 Choose a setup option:

- Choose **Default** to install all SDL Trados 2007 Suite Freelance components to the default location. This is the recommended option. Go to step 13.

- Select **Custom**, only if you want to perform a component-based installation or you want to change the location of your installation.
14 Click **Next**, the **Custom Setup** page is displayed. By default, all features/components are selected for installation.

- To see what sub-features are included in a component, click the plus (+) sign preceding the component. You cannot select sub-features and exclude them from the installation.

- To exclude a component from the installation, click the down arrow beside the component and select **This feature will not be available**. A red ✗ is displayed on the icon to indicate that it will not be installed.

- To include a currently excluded component, click the down arrow beside the component and select **This feature and all subfeatures will be installed on local hard drive**.

- To change the default installation location, click **Change** and complete the **Change Current Installation Folder** dialog box. When you have selected the required location, click **OK**.

- To view the space requirements for the software, click **Space** to display the **Disk Space Requirements** dialog box. Click **OK** when you have finished.
15 Click **Next**. The **Ready to Install the Program** page is displayed.

16 Click **Install** to begin the SDL Trados 2007 Suite Freelance installation.

   If you want to check or change your previous selections, click **Back**.

17 When SDL Trados 2007 Suite Freelance has been installed the **InstallShield Wizard Complete** page is displayed.
18 Click Finish. The SDL Trados 2007 Suite Synergy Setup wizard now begins. The Welcome page is displayed.

19 When the Next button becomes available, click it to display the End-User License Agreement page.
20 Read the terms of the agreement, select the **I accept the terms...** box and click **Next**.
The **Destination Folder** page is displayed.

21 Click **Next** to install SDL Trados Synergy to the default location. The **Ready to Install** page is displayed.

To select a different installation location, click the **Browse** button and navigate to the required location.
22 Click **Install** to begin the installation. The **Installing SDL Trados Synergy** page is displayed. A status bar indicates installation progress.

![Installing SDL Trados Synergy 2007](image)

23 When Synergy has been installed the **Completed the SDL Trados Synergy 2007 Setup Wizard** page is displayed.

![Completed the SDL Trados Synergy 2007 Setup Wizard](image)
24 Click **Finish**. The SDLX installer begins.

25 Click **Next**. The SDLX 2007 **License Agreement** page is displayed.
26 Accept the terms of the license and click Next. The **Choose Destination Location** page is displayed. It shows where SDLX 2007 will be installed.

![Choose Destination Location dialog box](image)

To install SDLX to a different location click **Browse** and use the **Choose Location** dialog box to select the location.

27 Click Next. The **Ready to Install Program** page is displayed.

![Ready to Install Program dialog box](image)
28 Click **Install** to begin the SDLX 2007 installation. When SDLX has been installed the **SDLX Installation Wizard Completed** page is displayed.

29 Click **Finish**. The SDL Passolo Essential installer is launched.
30 Click Next. The Destination Location page is displayed.

If you want to install SDL Passolo Essential to a different location, click Browse. The Select Destination Location dialog box is displayed. Navigate to the required folder and click OK to return to the Destination Location page.

31 Click Next. The Select Components page is displayed. It lists the different items that will be installed.

To install all items, go to step 32.
To remove an item from the list, clear the check box next to the item. To install SDL Passolo, ensure that the check box next to Program Files is selected.

32 Click Next. The Important Note page is displayed.

If you have a previous install of SDL Passolo Essential running on your machine, close the application and then click Next. The Start Installation page is displayed.
Click **Install** to begin installing SDL Passolo Essential. The Installing page is displayed. The **All Files** section shows installation progress.

- Microsoft Primary Interperability Assemblies 2005 is installed.

- Your system configuration is updated with the SDL Passolo Essential install.
When SDL Passolo Essential has been installed, the following page is displayed.

35 Click **Finish**. The product **Activation Utility for SDL Trados 2007 Suite** prepares to install.
When the activation utility has been installed the SDL Product Activation wizard is displayed.

Choose an option and click Next. The options available are:

- Go to the SDL website and purchase a software license for SDL Trados 2007 Suite.
- Activate a license you have already purchased.
- Work with the software free of charge for 30 days in trial mode.

NOTE
For more information about the Product Activation Wizard, see "Activating your Product using the SDL Product Activation Wizard" on page 2-13.

If you chose either of the first two options you are taken to the appropriate screen and guided through the rest of the selected process.

If you chose to continue with the free trial, the installation is now complete.

SDL Trados 2007 Suite Freelance and Synergy are now added to the Start menu on your desktop. Use the Start menu to launch each component as a stand-alone application.
MAINTAINING YOUR SDL TRADOS 2007 SUITE FREELANCE INSTALLATION

You can modify, repair or remove your SDL Trados 2007 Suite Freelance installation at any time using the program maintenance features available with the SDL Trados 2007 Suite Freelance installer. These features are available on the **Program Maintenance** page of the installation wizard as follows:

- **Modify** – use this option to add or remove components to and from your installation.
- **Repair** – use this option to repair or restore missing files, shortcuts or registry entries in your installation.
- **Remove** – use this option to remove SDL Trados 2007 Suite Freelance software completely from your computer.

You can access the SDL Trados 2007 Suite Freelance installation wizard and program maintenance features through the **Add or Remove Programs** dialog box in the **Control Panel** of your computer.

**NOTE**

To repair or modify your SDL Trados 2007 Suite Freelance installation, you must have access to the installer setup files in their original location.

**Modifying your Installation**

Use the modify feature in the SDL Trados 2007 Suite Freelance installer to add or remove components from your current installation.

1. From the **Start** menu on your computer, choose **Settings** > **Control Panel**.
2. In the **Control Panel**, select **Add or Remove Programs** to open the **Add or Remove Programs** dialog box.
3. In the **Currently installed programs** list, select SDL Trados 2007 Suite Freelance and click **Change**. This starts the SDL Trados 2007 Suite Freelance installation wizard.
4 In the installation wizard, click **Next** to continue to the **Program Maintenance** page:

![Program Maintenance](image1)

5 On the **Program Maintenance** page, select **Modify** and then **Next** to continue.

6 The **Custom Setup** page lists all the SDL Trados 2007 Suite Freelance components and indicates which components are currently included in your installation.

- Click the plus (+) signs in the component tree to display all subfeatures.
- Select the components to add to your installation. Note that subfeatures cannot be installed independently of their parent features.
Mark the components to remove from your installation with an X. Removing a parent feature also removes its subfeatures.

7 Click Next to continue and proceed with the installation as outlined in the previous section.

Repairing your Installation

Use the repair feature in the SDL Trados 2007 Suite Freelance installer to repair or restore missing files or Windows registry entries in your installation.

1 From the Start menu on your computer, choose Control Panel.

2 In the Control Panel, select Add or Remove Programs.

3 In the Currently installed programs list, select SDL Trados 2007 Suite Freelance and click Change. This starts the SDL Trados 2007 Suite Freelance installation wizard.

4 In the installation wizard, click Next to go to the Program Maintenance page.

5 On the Program Maintenance page, select Repair and then Next to continue.

6 On the Select License Type page, select your license type. Click Next.

7 On the Ready to Repair the Program page, click Install. The installation wizard automatically runs the repair feature. When it is complete, click Finish.

Removing SDL Trados 2007 Freelance

Use the Remove feature in the installer to remove all SDL Trados 2007 Suite Freelance files, folders and registry entries from your computer.

The Remove option is available on the Program Maintenance screen of the SDL Trados 2007 Suite Freelance installation wizard.
Access Restrictions

Access restrictions to certain SDL Trados 2007 Suite files and folders may apply to some users on Windows Vista, Windows 2000 or Windows XP systems. The files that are most likely to be subject to access restrictions are sample files.

Sample

The default installation location for SDL Trados 2007 sample files is:

C:\Documents and Settings\All Users\Shared Documents\SDL Trados\Samples

This folder is accessible from the Start menu. Select: Programs > SDL International > SDL Trados 2007 Suite Freelance > Trados > Samples.

To use the sample files you must have read/write access to the Samples subfolder. Alternatively, the sample files can be copied to a location where you do have read/write access.

The default installation location for SDL Passolo Essential sample files is:

C:\Documents and Settings\All Users\Documents\Passolo 2007\Samples

This folder is accessible from the Start menu. Select Programs > SDL Passolo 2007 > Samples.

Technical Support

For more information on technical support, please consult the online support center at http://support.sdl.com.

WHAT’S NEXT?

The instructions in the SDL Trados 2007 Suite user guides help you to quickly get started with the SDL Trados 2007 Suite Freelance. You can also view the SDL Trados 2007 Suite tutorials.

User guides are located in the Documentation folder accessible from Start > Programs > SDL International > SDL Trados 2007 Freelance > Documentation.

SDL Trados 2007 Suite tutorials are located in the Tutorials folder accessible from Start > Programs > SDL International > SDL Trados 2007 Freelance > Tutorials.
